

# Deployment Pipeline

Pemrograman Web (IF201)

Deployment & Optimization

## CI/CD Pipeline

**Deployment Pipeline** mengotomasi proses dari code push hingga production. CI (Continuous Integration) memastikan kode quality, CD (Continuous Deployment) mengirim ke production otomatis.

## Stages

1. **Build:** Compile, bundle, minify
2. **Test:** Unit, integration, e2e tests
3. **Lint:** Code quality checks
4. **Deploy:** Push ke staging/production

```
# GitHub Actions example
name: Deploy
on: [push]
jobs:
  deploy:
    runs-on: ubuntu-latest
    steps:
      - uses: actions/checkout@v4
      - run: npm ci
      - run: npm test
      - run: npm run build
      - run: npx vercel deploy --prod
```

## Ringkasan

Pipeline: build → test → lint → deploy. Automate everything. Gunakan staging environment sebelum production. Rollback strategy wajib ada.
